

anti-bacterial, anti-viral,  
and anti-fungus  
composition of the present  
invention

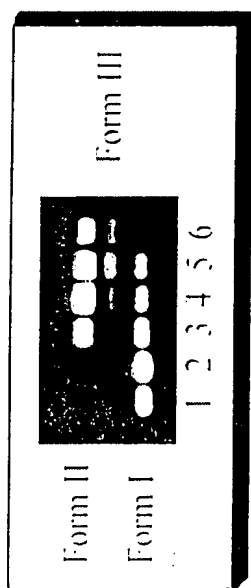

A bar graph comparing the ability of the present composition with other conventional sterilization methods to destroy fatty acid structure

Figure 1

anti-bacterial, anti-viral, and anti-fungus composition of the present invention

percentage of destroyed nucleic acids

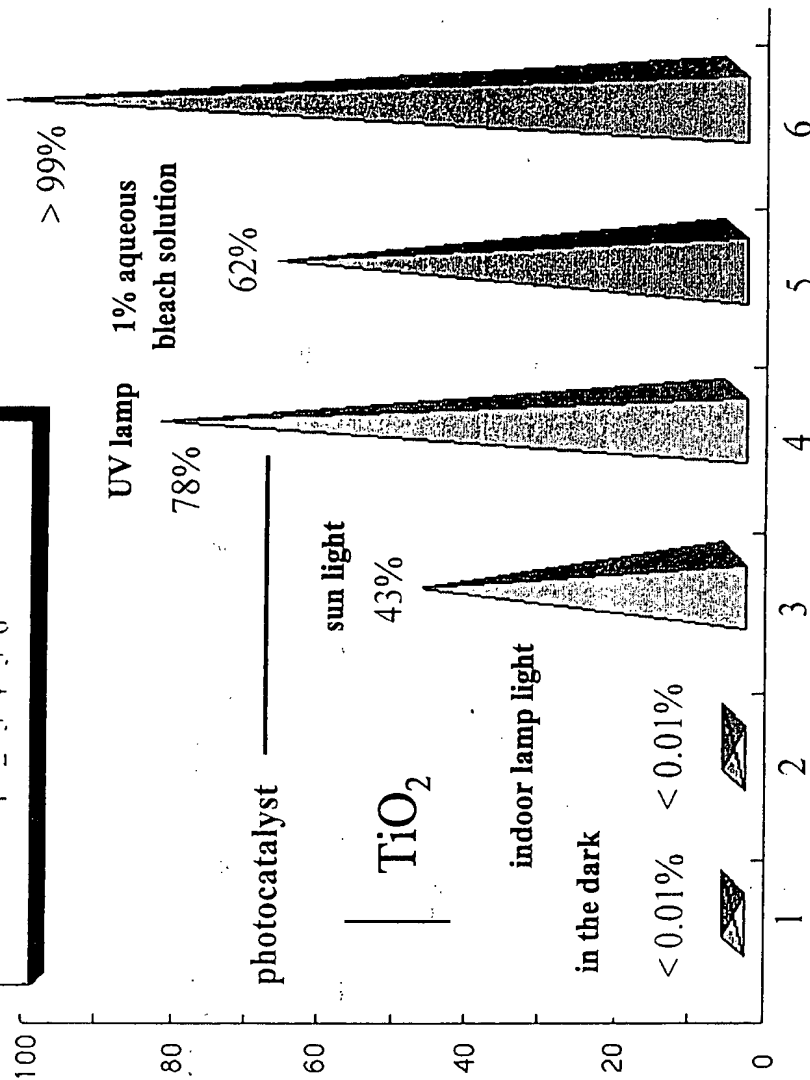

Figure 2

A bar graph comparing the ability of the present composition with other conventional sterilization methods to destroy virus gene structure
